Root Canal

OUR SERVICES

Root Canal

Root canal treatment is needed in cases of cavities that have reached to very deep surfaces of tooth. This procedure is also done when there is a broken tooth because of injury or any other reason or abscess or swelling. Root canal treatment is another way of

preserving tooth in the oral cavity. While root canal treatment is considered an everyday procedure in a dental practice, but making it painless is a specialist's forte. Our team of specialists have expertise in root canal & hone the skill to perform it painlessly.

Implants

Dental Implants are the latest and most advanced way of replacing a tooth, ranging from replacement of a single tooth to multiple teeth. Implants act by replacing the root portion of the tooth, thus not only replace a tooth, but also support the bone beneath thereby preventing loss of jaw bone after tooth loss. Dental implant prevents unnecessary grinding of adjacent natural teeth in cases of bridge placement thereby helps ensure the longevity and preserves the life of the remaining teeth. Dental implant surgery is an advanced and simple procedure which is completed in a single visit with the final treatment requiring single day, 2 weeks or 2 visits over a period of 3 months depending on the type of implant treatment done.

Pediatric/Kids Dentistry

Kids are one of the most difficult to handle. And when it comes to expressing, they always need special care. Our team of child specialist dentists not only caters to the needs of a child for dental treatment but they also make sure to educate the children for oral health awareness for future. In our commitment towards improving complete oral health, we

ensure we spend time with each child entering our clinic to educate them about the importance of oral health and how to maintain it. Kids enjoy coming to our setup as we make sure to provide them a friendly and playful environment.
